Prealgebra 2e Oct 22 2021 The images in this book are in grayscale. For a full-color version, see ISBN 9781680923261. Prealgebra 2e is designed to meet scope and sequence requirements for a one-semester prealgebra course. The text introduces the fundamental concepts of algebra while addressing the needs of students with diverse backgrounds and learning styles. Each topic builds upon previously developed material to demonstrate the cohesiveness and structure of mathematics. Students who are taking basic mathematics and prealgebra classes in college present a unique set of challenges. Many students in these classes have been unsuccessful in their prior math classes. They may think they know some math, but their core knowledge is full of holes. Furthermore, these students need to learn much more than the course content. They need to learn study skills, time management, and how to deal with math anxiety. Some students lack basic reading and arithmetic skills. The organization of Prealgebra makes it easy to adapt the book to suit a variety of course syllabi.

Interpreting Basic Statistics May 05 2020 • Students get valuable practice in interpreting statistical reporting as it actually appears in journals. In each of the 62 exercises, your students will read a brief excerpt of statistical reporting from a published research article. • Each exercise begins with guidelines for interpreting the statistics in the excerpt. • The questions on the excerpts promote learning by requiring students to • interpret information in tables and figures, • perform simple calculations to further their interpretations, • critique data-reporting techniques, and • evaluate procedures used to collect data. • Each exercise covers a limited number of statistics, making it easy for you to coordinate the exercises with lectures and a main textbook. • The questions in each exercise are divided into two parts: (1) Factual Questions and (2) Questions for Discussion. The factual questions require careful reading for details, while the discussion questions show students that interpreting statistics is more than a mathematical exercise. These questions require them to apply good judgment as well as statistical reasoning in arriving at appropriate interpretations. • Thirteen new exercises interspersed throughout show how to interpret a greater array of statistical reporting.

Non-Discrimination in International Trade in Services Apr 27 2022 The principle of non-discrimination is fundamental to the regulation of international trade in goods and services. In the context of trade in goods, the concept of 'like products' has become a key element of the legal analysis of whether a trade obstacle violates GATT non-discrimination obligations. The equivalent concept of 'like services and service suppliers' in GATS rules on non-discrimination has received little attention in WTO jurisprudence. In light of the remaining uncertainties, Nicolas Diebold analyses the legal problems of the GATS 'like services and services suppliers' concept using a contextual and comparative methodology. The 'likeness' element is not analysed in isolation, but in context with 'less favourable treatment' and regulatory purpose as additional elements of non-discrimination. The book also explores how far theories from non-discrimination rules in GATT, NAFTA, BITs and EC as well as market definition theories from competition law may be applied to 'likeness' in GATS.

Critical Pedagogy in the Twenty-First Century Jan 31 2020 This book simultaneously provides multiple analyses of critical pedagogy in the twenty-first century while showcasing the scholarship of this new generation of critical scholar-educators. Needless to say, the writers herein represent just a small subset of a much larger movement for critical transformation and a more humane, less Eurocentric, less paternalistic, less homophobic, less patriarchal, less exploitative, and less violent world. This volume highlights the finding that rigorous critical pedagogical approaches to education, while still marginalized in many contexts, are being used in increasingly more classrooms for the benefit of student learning, contributing, however indirectly, to the larger struggle against the barbarism of industrial, neoliberal, militarized destructiveness. The challenge for critical pedagogy in the twenty-first century, from this point of view, includes contributing to the manifestation of a truly global critical pedagogy that is epistemologically democratic and against human suffering and capitalist exploitation. These rigorous, democratic, critical standards for measuring the value of our scholarship, including this volume of essays, should be the same that we use to critique and transform the larger society in which we live and work.
