The Political Economy of Capital Cities Feb 23 2022

Capital cities that are not the dominant economic centers of their nations - so-called 'secondary capital cities' (SCCs) - tend to be overlooked in the fields of economic geography and political science. Yet, capital cities play an important role in shaping the political, economic, social and cultural identity of a nation. As the seat of power and decision-making, capital cities represent a nation's identity not only through their symbolic architecture but also through their economies and through the ways in which they position themselves in national urban networks. The Political Economy of Capital Cities aims to address this gap by

presenting the dynamics that influence policy and economic development in four in-depth case studies examining the SCCs of Bern, Ottawa, The Hague and Washington, D.C. In contrast to traditional accounts of capital cities, this book conceptualizes the modern national capital as an innovation-driven economy influenced by national, local and regional actors. Nationally, overarching trends in the direction of outsourcing and tertiarization of the public-sector influence the fate of capital cities. Regional policymakers in all four of the highlighted cities leverage the presence of national government agencies and stimulate the economy by way of various locational policy strategies. While accounting

for their secondary status, this book illustrates how capital-city actors such as firms, national, regional and local governments, policymakers and planning practitioners are keenly aware of the unique status of their city. The conclusion provides practical recommendations for policymakers in SCCs and highlights ways in which they can help to promote economic development.

Capital City Jun 29 2022 “This superbly succinct and incisive book” on urban planning and real estate argues gentrification isn’t driven by latte-sipping hipsters—but is engineered by the capitalist state (Michael Sorkin, author of *All Over the Map*) Our cities are changing. Around the world, more and more money is being invested in buildings and land. Real estate is now a \$217 trillion dollar industry, worth thirty-six times the value of all the gold ever mined. It forms sixty percent of global assets, and one of the most powerful people in the world—the former president of the United

States—made his name as a landlord and developer. Samuel Stein shows that this explosive transformation of urban life and politics has been driven not only by the tastes of wealthy newcomers, but by the state-driven process of urban planning. Planning agencies provide a unique window into the ways the state uses and is used by capital, and the means by which urban renovations are translated into rising real estate values and rising rents. *Capital City* explains the role of planners in the real estate state, as well as the remarkable power of planning to reclaim urban life.

Edinburgh - The Making of a Capital City Jun 25 2019

This book provides a unique and comprehensive review of the making and re-making of Edinburgh over most of the last millennium. A series of themes of wide relevance are explored and discussed in the context of their impact upon the form of the city and its success as a capital. These include:*The

European influence on urban and architectural form.*The synthesis of architecture, landscape and topography.*The dialogue between conservation and innovation.*The search for social, economic and cultural sustainability.*The role of governance and public action in urban ecology.A special feature of the book is the way the Old and New Towns are discussed as a connected problem of image and politics, rather than two isolated events in the history of the city. Likewise, the relations between the city centre, the suburban edge and beyond throughout the 20th century are examined holistically, allowing the reader to gain a broader perspective both of the city of today and of the future. What emerges is a city unique - at least in the UK - in terms of the care taken over its image and sense of identity, and the political and institutional investment made in preserving this.Key Features:*Deals with the development of the city in a holistic manner.*Relates the physical evolution of the city to

wide social, cultural, economic and political movements in the UK and Europe.*Uses design, conservation, sustainability and governance as major structuring themes.*Presents fresh perspectives on the making and re-making of Edinburgh over a period of nearly 1,000 years.

In this first comprehensive work in English to describe the building of Latin America's capital cities in the postcolonial period, Arturo Almandoz and his contributors demonstrate how Europe and France in particular shaped their culture, architecture and planning until the United States began to play a part in the 1930s. The book provides a new perspective on international planning.

gained increasing importance. Capital City Politics in Latin America tells the story of these cities: how they are changing operationally, how the the empowerment of mayors and other municipal institutions is exacerbating political tensions between local executives and regional and national entities, and how the cities' growing significance affects traditional political patterns throughout society. The authors weave a tapestry that illustrates the impact of local, national, and transnational power relations on the strategies available to Latin America's capital city mayors as they seek to transform their greater influence into desired actions. Austin Jul 31 2022 State capital and home of the University of Texas, Austin is the one city that belongs to all Texans. This finely written book, illustrated with historic photographs, tells the story of Austin's transformation from an "Indian haunted" frontier village into a residential mecca and high-tech hot spot. Called by Sam Houston at its founding the

"most unfortunate site upon earth for the seat of government," the infant community struggled for three decades against political enemies and competing towns before winning recognition as the permanent capital. The founding of the University of Texas turned the seat of politics into the seat of education, but Austin's nineteenth-century dreams of becoming a river port and a factory town came to naught. A slave city in a slave state, Austin cast its lot with the Confederacy. Retaining a frontier flavor into the 1890s, post-Civil War Austin became the headquarters of the Texas gambling fraternity and a magnet for cowmen seeking "booze and women of the night." Turning the nineteenth-century frontier town into an appealing twentieth-century residential community taxed the energies of civic leaders for several decades. Virtually parkless and with no paved streets in 1900, Austin by the 1940s boasted tree-lined boulevards, a cornucopia of

parks and pools, and a leisurely lifestyle. But for African American residents these were years of oppressive segregation. Mexicans encountered similar treatment as Austin became a tri-ethnic community during the 1920s and 1930s. Segregation gradually gave way in a divisive but nonviolent struggle. While adjusting to this, Austin experienced eye-popping expansion. Fearful that Austin would become "another Houston," residents sought to preserve the lifestyle that had made the capital city such an attractive place to live. "While many have examined how economic interests motivate political action, Bruce Carruthers explores the reverse relationship by focusing on how political interests shape a market. He sets his inquiry within the context of late Stuart England, when an active stock market emerged and when Whig and Tory parties vied for control of

a newly empowered Parliament. Probing such connections between politics and markets at both institutional and individual levels, Carruthers ultimately argues that competitive markets are not inherently apolitical spheres guided by economic interest but rather ongoing creations of social actors pursuing multiple goals." -- BACK COVER.

Political Landscapes of Capital Cities May 17 2021 Political Landscapes of Capital Cities investigates the processes of transformation of the natural landscape into the culturally constructed and ideologically defined political environments of capital cities. In this spatially inclusive, socially dynamic interpretation, an interdisciplinary group of authors including archaeologists, anthropologists, and art historians uses the methodology put forth in Adam T. Smith's *The Political Landscape: Constellations of*

Authority in Early Complex Politics to expose the intimate associations between human-made environments and the natural landscape that accommodate the sociopolitical needs of governmental authority. *Political Landscapes of Capital Cities* blends the historical, political, and cultural narratives of capital cities such as Bangkok, Cusco, Rome, and Tehran with a careful visual analysis, hinging on the methodological tools of not only architectural and urban design but also cultural, historiographical, and anthropological studies. The collection provides further ways to conceive of how processes of urbanization, monumentalization, ritualization, naturalization, and unification affected capitals differently without losing grasp of local distinctive architectural and spatial features. The essays also articulate the many complex political and ideological agendas of a diverse set of sovereign entities that planned, constructed, displayed, and

performed their societal ideals in the spaces of their capitals, ultimately confirming that political authority is profoundly spatial. Capital Cities and Urban Sustainability Jan 25 2022

Capital Cities and Urban Sustainability examines how capital cities use their unique hub resources to develop and disseminate innovative policy solutions to promote sustainability. Cities are taking a leading role in defining a sustainable future at a time when national, state, and regional governments in several countries do not provide sufficient leadership. Capital cities stand out among cities as likely leading drivers in the effort to empower

sustainable innovation as they provide a hub for connecting a variety of key constituencies. While acknowledging the successes capital cities have achieved, the international, multi-disciplinary contributors to this work discuss how there is room to do more and improve. The promotion of specific sustainability policies in crucial areas such as clean water provision, high tech innovation, public procurement contracting, and improving flood control in capital cities is examined through various global case studies. The examples range from relatively rich capital cities, such as Copenhagen, where the well-financed hub would be expected to succeed in generating sustainable policies, to poorer cities such as Phnom Penh, where such an optimistic outcome can seem less likely. *Beijing Welcomes You* Feb 11 2021 Presents a portrait of Beijing that evaluates its role in a China that has become an ascendant global power, drawing on interviews with scientists, developers, and

policy planners charged with transforming the city during the 2008 Olympics.

Capital Cities: Varieties and Patterns of Development and Relocation

Sep 01 2022 The issue of capital city relocation is a topic of debate for more than forty countries across the world. In this first book to discuss the issue, Vadim Rossman offers an in-depth analysis of the subject, highlighting the global trends and the key factors that motivate different countries to consider such projects, analyzing the outcomes and drawing lessons from recent capital city transfers worldwide for governments and policy-makers. *Capital Cities* studies the approaches and the methodologies that inform such decisions and debates. Special attention is given to the study of the universal patterns of relocation and patterns specific to particular continents and mega-regions and particular political regimes. The study emphasizes the role of capital city transfers in the context of nation- and state-building and

offers a new framework for thinking about capital cities, identifying six strategies that drive these decisions, representing the economic, political, geographic, cultural and security considerations. Confronting the popular hyper-critical attitudes towards new designed capital cities, Vadim Rossman shows the complex motives that underlie the proposals and the important role that new capitals might play in conflict resolution in the context of ethnic, religious and regional rivalries and federalist transformations of the state, and is seeking to identify the success and failure factors and more efficient implementation strategies. Drawing upon the insights from spatial economics, comparative federalist studies, urban planning and architectural criticism, the book also traces the evolution of the concept of the capital city, showing that the design, iconography and the location of the capital city play a critical role in the success and the viability of the state.

Planning Twentieth Century Capital Cities May 29 2022

The twentieth century witnessed an unprecedented increase in the number of capital cities worldwide - in 1900 there were only about forty, but by 2000 there were more than two hundred. And this, surely, is reason enough for a book devoted to the planning and development of capital cities in the twentieth

century. However, the focus here is not only on recently created capitals. Indeed, the case studies which make up the core of the book show that, while very different, the development of London or Rome presents as great a challenge to planners and politicians as the design and building of Brasília or Chandigarh. Put simply, this book sets out to explore what makes capital cities different from other cities, why their planning is unique, and why there is such variety from one city to another. Sir Peter Hall's 'Seven Types of Capital City' and Lawrence Vale's 'The Urban Design of Twentieth Century Capital Cities' provide the setting for the fifteen case studies which follow - Paris, Moscow and St Petersburg, Helsinki, London, Tokyo, Washington, Canberra, Ottawa-Hull, Brasília, New Delhi, Berlin, Rome, Chandigarh, Brussels, New York. To bring the book to a close Peter Hall looks to the future of capital cities in the twenty-first century. For anyone with an

interest in urban planning and design, architectural, planning and urban history, urban geography, or simply capital cities and why they are what they are, *Planning Twentieth Century Capital Cities* will be the key source book for a long time to come.

The Capital of Basketball Nov 10 2020 The celebration of Washington D.C. basketball is long overdue. The D.C. metro area stands second to none in its contributions to the game. Countless figures who have had a significant impact on the sport over the years have roots in the region, including E.B. Henderson, the first African-American certified to teach public school physical education, and Earl Lloyd, the first African-American to take the court in an actual NBA game. The city's Spingarn High School produced two players - Elgin Baylor and Dave Bing - recognized among the NBA's 50 greatest at the League's 50th anniversary celebration. No other high school in the country can make that claim. These figures and many

others are chronicled in this book, the first-ever comprehensive look at the great high school players, teams and coaches in the D.C. metropolitan area. Based on more than 150 interviews, *The Capital of Basketball* is first and foremost a book about basketball. But in discussing the trends and evolution of the game, McNamara also uncovers the turmoil in the lives of the players and area residents as they dealt with prejudice, educational inequities, politics, and the ways the area has changed through the years.

City, Capital and Water Jul 19 2021 The urban waterfront is widely regarded as a frontier of contemporary urban development, attracting both investment and publicity. *City, Capital and Water* provides a detailed account of the redevelopment of urban waterfronts in nine cities around the world: London, Tokyo, Kobe, Osaka, Hong Kong, Sydney, Toronto, Dublin and Amsterdam. The case studies cover different

frameworks for development in terms of the role of planning, approaches to financing, partnership agreements, state sponsorship and development profits. The analysis also demonstrates the effects of economic globalization, deregulation, the marginalization of planning and the manipulation of development processes by property and political interests.

Capital Cities in Africa Aug 27 2019 "Capital cities today remain central to both nations and states. They host centres of political power, not only national, but in some cases regional and global as well, thus offering major avenues to success, wealth and privilege. For these reasons capitals simultaneously become centres of "counter-power", locations of high-stakes struggles between the government and the opposition. This volume focuses on capital cities in nine sub-Saharan African countries, and traces how the power vested in them has evolved through different colonial backgrounds, radically different kinds of regimes after independence, waves of popular protest, explosive population growth

and in most cases stunted economic development. Starting at the point of national political emancipation, each case study explores the complicated processes of nation-state building through its manifestation in the "urban geology" of the city - its architecture, iconography, layout and political use of urban space. Although the evolution of each of these cities is different, they share a critical demographic feature: an extraordinarily rapid process of urbanisation that is more politically than economically driven. Overwhelmed by the inevitable challenges resulting from this urban sprawl, the governments seated in most of these capital cities are in effect both powerful - wielding power over their populace -and powerless, lacking power to implement their plans and to provide for their inhabitants"--Publisher description.

Socio-Economic Segregation in European Capital Cities Sep 28 2019 Growing inequalities in Europe are a major challenge threatening the sustainability of urban communities and the competitiveness of European cities. While the levels of socio-economic segregation in

European cities are still modest compared to some parts of the world, the poor are increasingly concentrating spatially within capital cities across Europe. An overlooked area of research, this book offers a systematic and representative account of the spatial dimension of rising inequalities in Europe. This book provides rigorous comparative evidence on socio-economic segregation from 13 European cities. Cities include Amsterdam, Athens, Budapest, London, Milan, Madrid, Oslo, Prague, Riga, Stockholm, Tallinn, Vienna and Vilnius. Comparing 2001 and 2011, this multi-factor approach links segregation to four underlying universal structural factors: social inequalities, global city status, welfare regimes and housing systems. Hypothetical segregation levels derived from those factors are compared to actual segregation levels in all cities. Each chapter provides an in-depth and context sensitive discussion of the unique features shaping inequalities and segregation in

the case study cities. The main conclusion of the book is that the spatial gap between the poor and the rich is widening in capital cities across Europe, which threatens to harm the social stability of European cities. This book will be a key reference on increasing segregation and will provide valuable insights to students, researchers and policy makers who are interested in the spatial dimension of social inequality in European cities. Learning them by heart is a rite of passage in grade school, a pedagogical exercise that emphasizes the importance of committing place-names to memory. But geographers have yet to analyze state capitals in any depth. In *American Capitals*, Christian Montès takes us on a well-researched journey across America—from Augusta to Sacramento, Albany to Baton Rouge—shedding light along the way on the historical circumstances that led to their appointment, their success or failure, and their evolution over time. While all state capitals have a number of characteristics in common—as symbols of the state, as embodiments of political power and decision making, as public spaces with private interests—Montès does not interpret them through a single

lens, in large part because of the differences in their spatial and historical evolutionary patterns. Some have remained small, while others have evolved into bustling metropolises, and Montès explores the dynamics of change and growth. All but eleven state capitals were established in the nineteenth century, thirty-five before 1861, but, rather astonishingly, only eight of the fifty states have maintained their original capitals. Despite their revered status as the most monumental and historical cities in America, capitals come from surprisingly humble beginnings, often plagued by instability, conflict, hostility, and corruption. Montès reminds us of the period in which they came about, “an era of pioneer and idealized territorial vision,” coupled with a still-evolving American citizenry and democracy.

Capital Cities at War Oct 22

2021 This ambitious volume marks a huge step in our understanding of the social history of the Great War. Jay Winter and Jean-Louis Robert have gathered a group of scholars of London, Paris and Berlin, who collectively have drawn a coherent and original study of cities at war. The contributors explore notions of well-being in wartime cities - relating to the economy and the question of whether the state of the capitals contributed to victory or defeat. Expert contributors in fields stretching from history, demography, anthropology, economics, and sociology to the history of medicine, bring an interdisciplinary approach to the book, as well as representing the best of recent research in their own fields. *Capital Cities at War*, one of the few truly comparative works on the Great War, will transform studies of the conflict, and is likely to become a paradigm for research on other wars.
