Nitrogen Fixation at the Millennium Nov 10 2020 The turn of the millennium from the twentieth to the twenty-first century provides an occasion to review our understanding of a biological process, biological nitrogen fixation, that is of prime importance for the continued survival of mankind. This process has provided a basis for maintaining soil fertility since the beginning of organised agriculture, yet its very existence was confirmed only just over a century ago. In the intervening years, an enormous intellectual effort has dispersed much of the mystery surrounding biological nitrogen fixation. Biological fixation is widely exploited in agriculture, as are nitrogen fertilisers prepared for the last hundred years under extreme conditions of temperature and pressure. However, despite all our efforts, the fundamental nature of the reactions involved at the heart of the biological process

remain unknown. This book aims to describe what we have learned in the last one hundred years or so about biological nitrogen fixation, about what its chemistry appears to be, and how it is applied in agriculture. This ambitious objective has not been attempted recently. It is aimed at students and those who wish to enter these very challenging areas of research, and who need to learn the state of the art at the turn of the millennium. The authors are all acknowledged world experts in their fields. They have prepared concise, well referenced and authoritative accounts of their subjects. This book provides a unique summary of the current state of knowledge that will be indispensable to all students and researchers, actual and potential, interested in biological nitrogen fixation.

Uncovering Covert Innovation Mar 15 2021 It is of central importance for companies to be innovative. To maximize their innovation potential, companies often rely on formal systems and processes for innovation management. It has been shown that such attempts have the side effect of inhibiting a number of valuable innovations. Some employees proceed informally and smuggle their innovations past formal barriers. Stephan Eicher analyses the interaction between bootleggers and their management. Using both qualitative and quantitative methods, he answers three primary research questions. What is the current state of research on bootlegging in R&D? How do bootleggers overcome illegitimacy upon disclosing their covert projects to decision-makers? How do different management styles and approaches affect the incidence of bootlegging? The results of this research paint a vivid picture of the relationship between covert innovation projects and the official management world of companies.

HRM's Contribution to Hard Work Aug 27 2019 The book seeks answers to the question: how has Human Resource Management contributed and how could it have contributed to the development of organisations and economy? Based on theories and literature review each contribution compares HRM practices of several thousand European middle and large organisations, with a special focus on Slovenia, one of the new EU member states, which has successfully managed its transition to market economy. The analyses reveal how strategic the role of HRM in organisations is, how it balances between hard and smart work and between more or less friendly forms of work and employment flexibility. Critical observations of traditional managerial practices, including autocratic and non-participative leadership, which have impacts not only on the organisations but also on wider society, are made. The position of youth is particularly accentuated. Clear differences in these respects have been observed in the wider European area. Recommendations for managers on how their organisations and HRM should be shaped on the way to the knowledge economy are elaborated.

Management Principles Nov 03 2022 Book & CD. To improve on an award-winning book poses a major challenge to its authors. The authors of this book took the challenge head-on by conducting a major research study to determine what exactly the outcomes are that managers at different levels must deliver in contemporary organisations in South Africa, and the rest of Africa. The findings of this study, which dealt with current and near-future

management issues, as well as classical and contemporary thinking about management, were used as the blueprint for the updating of this book. After placing management in context, the authors deal with the knowledge, skills and dispositions required of managers to perform the management functions of planning, organising, leading and controlling in a volatile business world. Examples of how the functions are applied in practice are cited throughout the book. These examples refer mainly to South African organisations and situations that managers in South Africa, and Africa, have to deal with to create and sustain a competitive advantage for their organisations. The book endeavours to break down the silo effect of seeing the management functions as separate activities. This is done by continuously placing the management function at hand in a bigger context. This enables learners of management to assess the implications of management decisions on different people, processes, systems and so on that make up the organisation.
