**Nitric Oxide** Jan 23 2022 Nitric oxide, recently named "Molecule of the Year" by the journal Science, impinges on a wide range of fields in biological research, particularly in the areas of biomedicine and cell and organismal biology, as well as in fundamental chemistry. This volume and its companion Volume 269 highlight the most current and up-to-date methods used to research the physiology and toxicity of nitric oxide in cellular and organismal systems. It will be a valuable resource for the experienced researcher as well as for those newly entering the field. Key Features \* Generation, detection, and characterization of biological and chemical sources of nitric oxide \* Biochemistry and molecular biology of enzymes and proteins associated with nitric oxide metabolism

**Corrosion-Resistant Piping Systems** Jun 03 2020 This work presents a step-by-step procedure for determining the most suitable piping material for any given situation. It describes all corrosion-resistant piping systems - including thermoset and thermoplastic, lined and metallic systems and miscellaneous systems such as glass, carbon and clay. A compatibility table for each piping system, compiling the corrosion resistance of over 175 common corrodents, is provided.

**Nitrosation Reactions and the Chemistry of Nitric Oxide** Aug 30 2022 Since 1988, there has been much literature published on the chemistry of nitric oxide, particularly in the field of S-nitrosation and the chemistry of S-nitroso compounds. Written by a chemist for the chemistry community, this book provides an update of the chemistry of nitrosation reactions, dealing with both the synthetic and mechanistic aspects of these reactions. It also looks at the chemistry of nitric oxide in relation to the amazing biological properties of this simple diatomic molecule, which were unknown until around 1990. \* Provides an update on previously published literature on nitric oxide chemistry \* Contains chapters on reagents for nitrosation, nitrosation at nitrogen, aliphatic and aromatic carbon, oxygen, sulfur and metal centres \* Looks at hot research topics such as synthesis, properties and reactions of s-nitrosothiols

**Nitric Oxide** Jun 27 2022 The critically acclaimed laboratory standard for more than forty years, *Methods in Enzymology* is one of the most highly respected publications in the field of biochemistry. Since 1955, each volume has been eagerly awaited, frequently consulted, and praised by researchers and reviewers alike. Now with more than 300 volumes (all of them still in print), the series contains much material still relevant today—truly an essential publication for researchers in all fields of life sciences.
