Human Resource Management in Construction Projects Dec 25 2021 Although construction is one of the most labour-intensive industries, people management issues are given inadequate attention. Furthermore, the focus of attention with regards to HR has been on the strategic aspects of HRM function - yet most problems and operational issues arise on projects. To help redress these problems, this book takes a broad view of HRM, examining the strategic and operational aspects of managing people within the construction sector. The book is aimed at project managers and students of project management who, until now, have been handed the responsibility for human resource management without adequate knowledge or training. The issues addressed in this book are internationally relevant, and are of fundamental concern to both students and practitioners involved in the management of construction projects. The text draws on the authors' experience of working with a range of large construction companies in improving their HRM operational activities at both strategic and operational levels, and is well illustrated with case studies of projects and organizations.

Barriers to Employment for Offenders and Ex-offenders Sep 29 2019 This research explores the evidence on the level, pattern and causes of unemployment among people with a criminal record (PwCR) in the UK, with a focus on the recruitment stage of the hiring process and the impact of knowledge of a criminal record on the decision to employ. The Police Act of 1977 introduced 'Basic Disclosure' which authorised employers, with the consent of the individual, to access information on job applicants' and employees' criminal records. A new piece of legislation, the Rehabilitation of Offenders Act, soon to come into force, will alter that ability, and for some PwCR, the Act will allow them to put their criminal record entirely behind them. The causes of unemployment among PwCRs is assumed to be high. However research shows that part of this group - those in prison, and those under probation supervision - exhibit characteristics associated with employment difficulties, such as low qualifications and drug and alcohol abuse. Irrespective of criminal record, this group

would be expected to suffer above average levels of unemployment. What impact, then, does the criminal record alone have?

Resilient Health Care Jul 20 2021 Health care is everywhere under tremendous pressure with regard to efficiency, safety, and economic viability - to say nothing of having to meet various political agendas - and has responded by eagerly adopting techniques that have been useful in other industries, such as quality management, lean production, and high reliability. This has on the whole been met with limited success because health care as a non-trivial and multifaceted system differs significantly from most traditional industries. In order to allow health care systems to perform as expected and required, it is necessary to have concepts and methods that are able to cope with this complexity. Resilience engineering provides that capacity because its focus is on a system's overall ability to sustain required operations under both expected and unexpected conditions rather than on individual features or qualities. Resilience engineering's unique approach emphasises the usefulness of performance variability, and that successes and failures have the same aetiology. This book contains contributions from acknowledged international experts in health care, organisational studies and patient safety, as well as resilience engineering. Whereas current safety approaches primarily aim to reduce or eliminate the number of things that go wrong, *Resilient Health Care* aims to increase and improve the number of things that go right. Just as the WHO argues that health is more than the absence of illness, so does *Resilient Health Care* argue that safety is more than the absence of risk and accidents. This can be achieved by making use of the concrete experiences of resilience engineering, both conceptually (ways of thinking) and practically (ways of acting).

The Success of Apprenticeships Mar 16 2021 Apprenticeships can offer apprentices, their teacher-tutors and business apprenticeship supervisors experiences that are rich in knowledge. *The Success of Apprenticeships* presents the observations and opinions of 48 actors regarding apprenticeships. These testimonies recount how apprenticeships allowed them to improve their expertise, their professional practices and their organization skills. This book also examines how their interactions in the work/study process allowed them not only to develop the skills of apprentices, but also the skills of those who accompanied them - the teacher-tutors and the business apprenticeships supervisors. The creation of an authentic community of apprentices subscribes to the formation of an ecosystem of learning, in which each individual harvests fruits in terms of

the development of their personal abilities.

Safety-I and Safety-II Aug 01 2022 Safety has traditionally been defined as a condition where the number of adverse outcomes was as low as possible (Safety-I). From a Safety-I perspective, the purpose of safety management is to make sure that the number of accidents and incidents is kept as low as possible, or as low as is reasonably practicable. This means that safety management must start from the manifestations of the absence of safety and that - paradoxically - safety is measured by counting the number of cases where it fails rather than by the number of cases where it succeeds. This unavoidably leads to a reactive approach based on responding to what goes wrong or what is identified as a risk - as something that could go wrong. Focusing on what goes right, rather than on what goes wrong, changes the definition of safety from 'avoiding that something goes wrong' to 'ensuring that everything goes right'. More precisely, Safety-II is the ability to succeed under varying conditions, so that the number of intended and acceptable outcomes is as high as possible. From a Safety-II perspective, the purpose of safety management is to ensure that as much as possible goes right, in the sense that everyday work achieves its objectives. This means that safety is managed by what it achieves (successes, things that go right), and that likewise it is measured by counting the number of cases where things go right. In order to do this, safety management cannot only be reactive, it must also be proactive. But it must be proactive with regard to how actions succeed, to everyday acceptable performance, rather than with regard to how they can fail, as traditional risk analysis does. This book analyses and explains the principles behind both approaches and uses this to consider the past and future of safety management practices. The analysis makes use of common examples and cases from domains such as aviation, nuclear power production, process management and health care. The final chapters explain the theoretical and practical consequences of the new perspective on the level of day-to-day operations as well as on the level of strategic management (safety culture). ***Safety-I and Safety-II*** is written for all professionals responsible for their organisation's safety, from strategic planning on the executive level to day-to-day operations in the field. It presents the detailed and tested arguments for a transformation from protective to productive safety management.

Having identified the broader picture, the text then begins to focus much more explicitly on a variety of HR policies and practices such as: • recruitment and selection: the effects of ICT, skills required specific for the industry and the nature of advertising • legislation and equal opportunities: illegal discrimination and managing diversity • staff health and welfare: violence in the workplace, working time directives, smoking and alcohol and drug misuse • remuneration strategies in the industry: the 'cafeteria award' approach, minimum wage and tipping Human Resource Management for the Hospitality and Tourism Industries is illustrated throughout with both examples of best practice for prescriptive teaching and discussion, and international case studies to exercise problem solving techniques and contextualise learning. Market Leader Oct 30 2019

From Labouring to Learning Oct 23 2021 Highly Commended in the Society of Educational Studies Book Prize
This book explores how economic changes and the growing importance of educational qualifications in a shrinking labour market, particularly effects marginalized young men. It follows a group of young working-class men in a de-industrial community and challenges commonly held representations that often appear in the media and in policy discourses which portray them as feckless, out of control, educational failures and lacking aspiration. Ward argues that for a group of young men in a community of social and economic deprivation, expectations and transitions to adulthood are framed through the industrial legacy of geographically and historically shaped class and gender codes. These codes have an impact on what it means to be a man and what behaviour is deemed acceptable and what is not.
