Comprehensive Healthcare Simulation: Implementing Best Practices in Standardized Patient Methodology Jun 06 2020 This book brings to life best practices of Human Simulation; maximizing the Standardized Patient (SP) methodology that has played a major role in health professions learning and assessment since the 1960s. Each chapter reflects the Association of SP Educators Standards of Best Practices (SOBPs) and provides guidance for implementation. Multiple insights are offered through embedded interviews with international experts to provide examples illustrating successful strategies. The Human Simulation Continuum Model, a practical and theoretical framework, is introduced to guide educators in decision-making processes associated with the full range of human simulation. The Continuum Model spans improvisations, structured role-play, embedded participants, and simulated-standardized patients. This book also provides the full "how-to" for SP methodology covering topics including; case/scenario development, creating training material, training techniques for case portrayal, training communication and feedback skills, GTA/MUTA/PTA training, SP program administration and professional development for SP Educators. A pragmatic, user-friendly addition to the Comprehensive Healthcare Simulation series, *Implementing Best Practices in Standardized Patient Methodology* is the first book framed by the ASPE SOBPs, embracing best practices in human simulation and marshaling the vast expertise of a myriad of SP Educators.

Neurologic Interventions for Physical Therapy- E-Book Dec 01 2019 Master the role of the physical therapist or physical therapist assistant in neurologic rehabilitation! *Neurologic Interventions for Physical Therapy, 3rd Edition* helps you develop skills in the treatment interventions needed to improve the function of patients with neurologic deficits. It provides a solid foundation in neuroanatomy, motor control, and motor development, and offers clear, how-to guidelines to rehabilitation procedures. Case studies help you follow best practices for the treatment of children and adults with neuromuscular impairments caused by events such as spinal cord injuries, cerebral palsy, and traumatic brain injuries. Written by physical therapy experts Suzanne 'Tink' Martin and Mary Kessler, this market-leading text will help you prepare for the neurological portion of the PTA certification exam and begin a successful career in physical therapy practice. Comprehensive coverage of neurologic rehabilitation explores concepts in neuroanatomy, motor control and motor learning, motor development, and evidence-based treatment of adults and children with neuromuscular impairments. Over 700 photos and drawings clarify concepts, show anatomy, physiology,

evaluation, and pathology, and depict the most current rehabilitation procedures and technology. Case studies demonstrate the patient examination and treatment process, and show how to achieve consistency in documentation. Proprioceptive Neuromuscular Facilitation chapter describes how PNF can be used to improve a patient's performance of functional tasks by increasing strength, flexibility, and range of motion – key to the treatment of individuals post stroke. Review questions are included at the end of each chapter, with answers at the back of the book. Illustrated step-by-step intervention boxes, tables, and charts highlight important information, and make it easy to find instructions quickly. Use of language of the APTA Guide to Physical Therapist Practice ensures that you understand and comply with best practices recommended by the APTA. NEW photographs of interventions and equipment reflect the most current rehabilitation procedures and technology. UPDATED study resources on the Evolve companion website include an intervention collection, study tips, and additional review questions and interactive case studies.

Transfer of Education Leadership Training Skills Jun 18 2021 Transfer of Training Skills into practice is a challenging endeavor in this dynamic world. This book is based on experience of training more than 1000 educators per year and following up on their experiences as they implement what they have learnt into practice. The book is based on four school leaders who were showing improvement in the school management and students learning outcome. Their success was tracked to identify what made them transfer their skills into practice. This book offers insights on the barriers trainees should work to overcome so that they are able to transfer their training skills into practice. The book is based on real school leaders where a detailed high skill research was implemented to understand what the school leaders went through and how they managed the barriers they faced. The book is for school leaders, managers, and school owners, training providers, universities and institutions working on leadership, training and transfer of training into practice. The researched insights are valuable to the readers as they receive guidance on how to implement what they read into practice. Its a gem worth of applicable knowledge that transcend beyond the book.

The Worker Center Handbook Oct 23 2021 Worker centers are becoming an important element in labor and community organizing and the struggle for fair pay and decent working conditions for low-wage workers, especially immigrants. There are currently more than two hundred worker centers in the country, and more start every month. Most of these centers struggle as they try to raise funds, maintain stable staff, and build a membership base. For this book, Kim Bobo and Marién Casillas-Pabellón, two women with extensive experience supporting and leading worker centers, have interviewed staff at a broad range of worker centers with the goal of helping others understand how to start and build their organizations. This book is not theoretical, but rather is designed to be a practical workbook for staff, boards, and supporters of worker centers. Geared toward groups that want to build worker centers, this book discusses how to survey the community, take on an initial campaign, recruit leaders, and raise seed funds. Bobo and Casillas-Pabellón also provide a wealth of advice to help existing centers become stronger and more effective. The Worker Center Handbook compiles best practices from around the country on partnering with labor, enlisting the assistance of faith communities and lawyers, raising funds, developing a serious membership program, integrating civic engagement work, and running major campaigns. The authors urge center leaders to both organize and build strong administrative systems. Full of concrete examples from worker centers around the country, the handbook is practical and honest about challenges and opportunities.

Neurorehabilitation for the Physical Therapist Assistant Jun 26 2019 Neurorehabilitation for the Physical Therapist Assistant provides a complete overview of the foundations of various neurological medical conditions and presents a wide array of clinical problems that a physical therapist assistant may encounter in the educational or clinical setting. Darcy Umphred and Connie Carlson, along with 11 contributors, offer a thorough explanation of the PT to PTA delegation process that is both unique and comprehensive. Throughout the pages of Neurorehabilitation for the Physical Therapist Assistant the PTA is provided with the necessary tools to effectively interact with and treat patients who suffer from neurological medical diagnoses. This text also covers a wide variety of neurological clinical problems that a PTA may encounter. Neurorehabilitation for the Physical Therapist Assistant presents specific examples of tests and measures and interventions that a PTA may use when treating patients with CNS damage. Multiple chapters offer one or more case studies that will aid students and practicing PTAs in the analysis of PTA roles and the delegation of specific tasks, as well as why a PT may not choose to delegate a task. Also included is a brief

discussion of selected pathologies and their progressions or complications, which gives the PTA a means to identify contraindications or changes in patient behavior that need to be reported. Features: -Interactive website access that provides the answers to the questions and case studies for each chapter. -A clear delineation of the differences between the frameworks used by medical practitioners and those used by the PT. -Detailed descriptions of tests and measures and interventions used by the PTA. -A focus on interactions between types of movement dysfunctions and intervention selection. -A discussion of disablement and enablement models. The volumes of knowledge presented in this unique and detailed text ensures Neurorehabilitation for the Physical Therapist Assistant will accompany the PTA throughout their education and into their career.

Computational Surgery and Dual Training Mar 04 2020 The future of surgery is intrinsically linked to the future of computational sciences: the medical act will be computer assisted at every single step, from planning to post-surgery recovery and through the surgical procedure itself. Looking back at the history of surgery, surgery practice has changed dramatically with the extensive use of revolutionary techniques, such as medical imaging, laparoscopy, endoscopy, sensors and actuators, and robots. This trend is dependent on the use of computer processing, computational method, and virtualization. Computational surgery will not only improve the efficiency and quality of surgery, but will also give new access to very complex operations that require extreme precision and minimum intrusion. Such examples are today's inoperable cancer tumors that have invaded critical tissues or nervous centers. In order for this milestone to be reached quicker and more efficiently, surgeons will have to become very familiar with computing methods, such as image analysis, augmented reality, and/or robotics. It will be critical for surgeons to assimilate computers in their training, understand how computers work, understand the limitations/advantages of these computer tools, and be able to interpret computer imaging and simulations.
